

Electronic Health Information (EHI) Export

Innovaccer Analytics Private Ltd. EHI Export supports single patient and population export. Both exports may be performed by authorized end users without developer assistance. Single patient and population export is available at no charge.

Authorized users can access this feature through the executing standard FAAS functions and the data is available in the databases, which can be accessed by the stakeholders and can be exported in an **QRDA-I** format for usage by authorized users.

However, PHI data cannot be sent over the network without proper de-identification.

To gain additional insights into the structure and syntax of the QRDA-I, you may refer to the following link: https://www.hl7.org/implement/standards/product_brief.cfm?product_id=35
